

How to Run the C# Console Application

Prerequisites:

- Install **.NET SDK** (Latest version) from [Microsoft .NET Download](#).
- Ensure you have a **code editor** like **Visual Studio** or **Visual Studio Code** installed.

Steps to Run the Application Using Command Prompt:

1. **Open Command Prompt or Terminal:**
 - Navigate to the project folder where the C# files are saved.
 - Use the `cd` command to go to the correct directory. Example:
 - `cd`
2. **Compile the Code:**
 - Run the following command to build the project:
 - `dotnet build`
3. **Run the Application:**
 - Execute the following command to run the program:
 - `dotnet run`

Steps to Run the Application Using Visual Studio:

1. Open **Visual Studio**.
2. Click **Open a project or solution** and select the `.csproj` file.
3. Run the project.
